Manitoba

I. EXECUTIVE SUMMARY

Population and demographic projections have been prepared for the eight Economic Regions of Manitoba for the period 2005-2026. These projections are compatible with the MEDIUM level Manitoba population projections prepared by the Manitoba Bureau of Statistics (Manitoba Population Projections 2005 to 2036, MBS 2004-8, December 2004).

At the provincial level, the projection assumptions made were:

a) A constant total fertility rate of 1.80.
b) Net international migration increasing to 9,400 persons per year by 2009, and then declining to 7,300 by 2014 where it will stay for the remainder of the projection period.
c) Net interprovincial migration of -2,100 persons per year.
d) A moderate increase in life expectancy.

The Manitoba Bureau of Statistics projects that Manitoba's population will increase by 215,000 persons or 18.4% between 2004 and 2026. In 2026, the population of Manitoba is projected to be 1,385,300.

All regions, with the exception of **Parklands,** are projected to have increases in population by the end of the projection period. The **Parklands** region is projected to decrease by 2,600 persons or 6.0% between 2004 and 2026. The population loss of 2,600 (from 44,100 in 2004 to 41,500 in 2026) is due to a natural increase averaging -50 per year (i.e. 50 more deaths than births per year), combined with a projected annual net migration outflow of -70 persons.

The smallest projected percentage population increase will be for the **Southwest** region. The region's population is projected to increase by 2,000 persons above its 2004 population of 105,400. This is a total growth rate of 1.8% over the 2004 to 2026 period.

The **North** and the **North Central** regions are projected to have population increases of 8,400 (9.7%) and 5,800 (11.7%) respectively between 2004 and 2026. Both of these percentage increases are below the projected Manitoba population increase of 18.4% for the same time period.

The percent change in population for the **Winnipeg** and **Interlake** regions are both projected to be above the provincial percent change of 18.4%. **Winnipeg** is projected to grow by 20.6% (up 134,000 persons) between 2004 and 2026. The **Interlake** is projected to increase by 20.8% (up 18,100 persons). Winnipeg's share of the total population of Manitoba will grow from 55.53% in 2004 to 56.58% in 2026.

The **Southeast** region will have the largest projected percentage population increase at 33.5% (up 31,300 persons over the 2004 population of 93,500). The **South Central** region follows closely behind with a projected growth rate of 32.8% for an increase of 18,200 persons from the 2004 population of 55,200. Their share of the population will increase from 7.99% to 9.01% and 4.72% to 5.30% respectively.

II. INTRODUCTION

This report presents population projections and demographic components for the eight Manitoba Economic Regions during the period July 1, 2004 - June 30, 2026. The eight Economic Regions (also known as Official Regions for Data Collection) are aggregations of the 23 census divisions as follows:

ECONOMIC REGION	CENSUS DIVISIONS	2004 BASE POPULATION	PERCENT (%) DISTRIBUTION
Southeast	1, 2, 12	93,500	8.0
South Central	3, 4	55,800	4.8
Southwest	5, 6, 7, 15	105,400	9.0
North Central	8, 9, 10	49,300	4.2
Winnipeg	11	649,800	55.5
Interlake	13, 14, 18	87,000	7.4
Parklands	16, 17, 20	44,100	3.8
North	19, 21, 22, 23	85,800	7.3
Manitoba Total		1,170,300	100.0

These regional projections are compatible with the Medium level Manitoba population projections recently released by the Manitoba Bureau of Statistics (MBS 2004-8, December 2004). The base population for these projections is the Statistics Canada 2004 Post-Censal population estimate of 1,170,300 for Manitoba. This population has been distributed on a regional basis.

Projections are not forecasts but are based on what would occur if the stated assumptions hold true. The assumptions are based on recent trends and reflect the impact on regional populations if these trends were to continue. As the process of change is cumulative, the reliability of the projections may decrease over time. The Manitoba Bureau of Statistics will review the projections annually and revise when necessary.

To obtain further information on this report, please contact Jacqueline Storen at (204) 945-2396.

JANUARY 2005

III. PROJECTED REGIONAL POPULATION 2005 - 2026

Table 1 illustrates the annual estimated and projected population for Manitoba and its Economic Regions over the period 1996 to 2026. During the period 2005 to 2026, the population of Manitoba is projected to increase by 215,000 persons or 18.4%.

Based on the projected population changes displayed in Chart 1, the eight regions fall into three groups. Group one is composed of those regions that are projected to grow at a faster rate than the province as a whole during the projection period. Group two consists of those regions that are projected to have significant growth over the projection period but at less than the provincial rate of growth. The last group contains those regions that are projected to have either a decrease in population or to remain relatively unchanged over the projection period.

The regions in group one are Southeast, South Central, Winnipeg and Interlake. All four regions are projected to increase in population throughout the projection period at a rate greater than Manitoba's.

These regions are also projected to increase their share of Manitoba's population (as shown in Chart 2). The Southeast's share is to increase by 1.02 percentage points (from 7.99% to 9.01%) while South Central's share is increasing 0.58 points (from 4.72% to 5.30%). For the Interlake, an increase of 0.16 percentage points is projected from 7.43% to 7.59%.

Winnipeg which includes the Rural Municipality of Headingley is projected to exceed 700,000 persons by 2011. It's population share of Manitoba's population is projected to increase by 1.05 points in the next 21 years to 56.58%.

The regions in group two are North Central and North. Both of these regions are projected to have smaller percentage population increases than the provincial increase over the projection period. The population of the North Central region is projected to increase by 11.7% (5,800) over the projection period. From a 2004 base of 85,800, the population of the North is projected to increase 8,400 (9.7%) by the year 2026.

During this time period, the North Central's share of Manitoba's population is projected to decrease slowly to 3.98% in 2026 from 4.22% in 2004. The North is projected to have a population share decrease from 7.33% to 6.80% by the year 2026.

Group three consists of the two remaining regions of Parklands and Southwest. Parklands is projected to have a population decline while the Southwest is projected to have a very slight increase over the next 21 years. The population of Parklands is projected to fall 2,600, representing 6.0% of the 2004 base 44,100. The population of Southwest is projected to increase by 2,000 persons, which is 1.8% of the 2004 population of 105,400.

The Parklands' share of Manitoba's population will show a gradual decline, from 3.77% of Manitoba's population in 2004 to 2.99% by the year 2026. The Southwest's share is projected to decrease from 9.01% in 2004 to 7.75% by 2026.

The projected regional age structure is affected by two assumptions. These are the Manitoba fertility rate being below replacement level of 2.1 and increasing life expectancy among the all members of the population. As a result, all regions are projected to have a decrease in their share of population that is composed of zero to fourteen year-olds while an increase is projected for persons sixty-five years and older (see charts 9 and 10).

In particular, the Interlake region is projected to have the largest increase in the proportion of seniors (persons 65 and older), from 14.5% in 2004 to 21.7% in 2026. The North region follows closely behind the Interlake with an increase of 6.3 percentage points, from 5.2% of their population composed of seniors in 2004 to 11.5% in 2026. Other regions projected to have significant gains in their senior population are the Southeast (12.0% to 17.1%), North Central (13.0% to 18.7%) and Winnipeg (13.7% to 18.5%).

For the 0 to 14 year-olds, all regions are projected to record decreases but these declines are not as significant as the growth in seniors.

The projected aging of the population will increase the regional median age. The median age is such that exactly half of the population is older and the remaining half is younger. Provincially, the median age is projected to increase by 2.6 years over the projection period, from 37.0 in 2004 to 39.6 in 2026.

Six of the eight economic regions are projected to record increases in their median ages. The greatest increase in median age is projected for Winnipeg, from 37.6 in 2004 to 41.5 in 2026; an increase of nearly four years. Other regions projected to have significant growth in the median age were the North (26.1 to 28.5), the South Central (33.9 to 35.9) and the Southwest (39.5 to 41.4).

Two regions are projected to see their median ages decrease. The Parklands is projected to record a drop of 2.1 years in the median age, from 42.3 in 2004 to 40.4 in 2026. The median age in the Interlake is projected to decline by one year, from 40.8 in 2004 to 39.8 in 2026.

Regional age structures can be displayed graphically by an age pyramid. The age pyramids in Appendix E illustrate that the age structures differ between the regions. To illustrate, Charts 7 and 8 compare the age structures of Winnipeg and the North. The North region has proportionally more younger persons than Winnipeg.

Total net migration is projected to have a significant impact on some of the regions. At the provincial level, net migration is projected to rise to nearly 7,300 by 2008 and then decrease to 5,200 by 2013, where it will stay for the remainder of the projection period. Significant positive net migration is projected for Winnipeg, the Southeast, South Central and Interlake regions. While the North is projected to observe negative net migration. The remaining regions are projected to have relatively smaller net migration totals.

Details of the projected regional populations are presented in Appendices A through E.

IV. PROJECTED POPULATION COMPONENTS ASSUMPTIONS

i) BIRTHS

This section presents the projected births for the eight Economic Regions to the end of the projection period. For projection purposes, the number of births is determined by the number of females 15 - 49 years of age, the total fertility rate, and the age specific distribution of the total fertility rate.

The total fertility rate for each region is shown in Table 2 below, with the projected rates being the estimated rates for 2001 adjusted in order to reflect the projected constant fertility rate at the provincial level. The age specific distribution of the total fertility rate is the latest 5 year average for Manitoba.

With these assumptions, the projected number of births is solely determined from the number of females in each age category between 15 and 49 years of age.

TABLE 2: TOTAL FERTILITY RATES BY REGION

	OBSERVED					PROJECTED
REGION	1981	1986	1991	1996	2001	
Southeast	2.25	2.21	2.11	1.99	2.16	1.95
South Central	2.51	2.26	2.34	2.32	2.27	2.00
Southwest	2.03	1.90	1.87	1.77	1.64	1.63
North Central	2.24	2.21	2.24	2.39	2.26	2.15
Winnipeg	1.58	1.67	1.79	1.68	1.59	1.58
Interlake	1.85	2.00	1.68	1.96	1.82	1.82
Parklands	2.28	2.40	2.04	1.87	1.67	1.90
North	2.89	2.61	2.97	2.99	2.91	2.75
Manitoba	1.86	1.89	1.95	1.89	1.80	1.80

At the provincial level, a constant total fertility rate of 1.80 coupled with a steady increase in the number of females of child bearing age to 2020 will result in a projected increase in the number of births from 13,700 in 2001 to 16,100 by 2019. Then, the aging of the female population will result in a gradual decline to 15,830 births by 2026.

The Southeast, South Central and Interlake regions will all have marked increases in the projected number of births. The Southeast will increase by 510 per year or 45.1% over the 2004 level of 1,130. The Interlake will increase by 420 or 52.5% over the 2004 level of 800. The South Central region will increase by 250 or 33.3% over the 2004 level of 750. In contrast, Winnipeg births are projected to grow by 6.9% between 2004 and 2026.

In the Southwest and Parklands, the number of births per year is projected to peak in 2015 at 1,220 births in the Southwest and 530 in the Parklands. In 2004, the number of births in the Southwest was 1,110 and 470 in the Parklands. After 2015, the number of births is projected to decrease to levels similar to 2004 levels, with 1,070 in the Southwest region and 470 in the Parklands Region.

However, the North Central region is projected to peak in 2018 at 800 births per year, 150 more than in 2004 and above the projected 750 births for 2026. The North follows a similar pattern with the annual number of births is projected to grow to 1,970 by 2020 before decreasing for the last six years of the projection period to 1,930. In 2004, the number of births in the North totalled 1,840.

Detailed information on the number of births by region can be found in Table A1 in Appendix A.

ii) DEATHS

This section presents the projected number of deaths for each of the Economic Regions. For projection purposes, the number of deaths is derived from the life expectancy at birth for each region.

From the life expectancy tables, survival rates by sex and single years of age were determined. These survival rates are then used as the probability of a person being alive at the start of the following year.

During the next 22 years, moderate increases in life expectancy at birth have been projected. These increases are 0.9 years for females and 2.0 years for males at the provincial level. The North will record the largest increase in life expectancy, 4.2 years for females and 5.1 years for males.

TABLE 4: LIFE EXPECTANCY AT BIRTH BY REGION (In Years)

	FEMALE		MALE	
REGION	2004	2026	2004	2026
Southeast	81.5	82.2	76.3	77.3
South Central	81.9	82.2	75.9	77.3
Southwest	81.6	82.2	75.8	77.3
North Central	81.5	82.2	75.4	77.3
Winnipeg	81.3	82.2	75.9	77.3
Interlake	81.9	82.2	76.4	77.3
Parklands	81.4	82.2	75.8	77.3
North	76.5	80.7	70.0	75.1
Manitoba	81.2	82.1	75.2	77.2

The number of deaths in Manitoba is projected to increase by 26.9% or 2,710 deaths between 2004 and 2026. On a regional basis, number of deaths in the South Central, North Central, Winnipeg and North regions are projected to grow in a similar manner over the next 22 years. The number of deaths in Winnipeg is projected to grow by 29.3% or 1,630 deaths per year, followed by projected increases of 27.5% (up 110) for North Central, 25.5% (up 120) in the North and 18.8% (up 90) in South Central.

The number of deaths in Southwest is projected to increase by 30 per year (2.6%) to the end of the projection period. In contrast, the number of deaths in the Southeast and Interlake regions are projected to increase by 410 and 370 per year (61.2% and 48.7% respectively) during the same period.

The only region projected to have a decreased number of deaths for the projection period is the Parklands. Over the next twenty-one years, the number of deaths in the Parklands will decrease by 8.8% or 50 deaths per year by 2026.

Detailed information on the number of deaths by region can be found in Table A2 Appendix A. In addition, natural increase (births minus deaths) by region can be found in Table A3.

MIGRATION SCENARIOS

As the most significant component of population growth, migration has the greatest impact on the year-to-year change in the population of Manitoba's regions.

For these regional projections, the migration scenarios have been developed using the IN and OUT flows for each of the three components: international, interprovincial and intraprovincial. However, in this report only the net figure is presented for each migration component.

The data presented are based on estimates of the regional migration distributions for the five year period July 1998 to June 2003. With the exception of international immigration, each projected regional distribution was calculated by averaging its historical percentage distribution over the five year period July 1998 to June 2003. For international migration, some adjustments were made to the five-year averages to better reflect recent departures from historical trends. The final data for the projection period was then calculated from the regional distribution and the projected Manitoba level for each component.

iii) INTERNATIONAL MIGRATION

TABLE 5: INTERNATIONAL MIGRATION BY REGION 1998 TO 2003

REGION	IMMIGRATION(*) 5 YEAR AVERAGE	IMMIGRATION(*) PERCENT DIST'N (%)	EMIGRATION 5 YEAR AVERAGE	EMIGRATION PERCENT DIST'N (%)
Southeast	562	10.4	103	6.3
South Central	622	11.5	44	2.7
Southwest	225	4.2	113	6.9
North Central	57	1.0	36	2.2
Winnipeg	3,746	69.4	1,147	70.2
Interlake	121	2.2	90	5.5
Parklands	32	0.6	30	1.8
North	31	0.6	71	4.4
Manitoba	5,396	100.0	1,635	100.0

* Includes immigrants (annual average 4,415), Returning Canadians (average 1,030) and net change in the number of non-permanent residents (average 513).

The projected regional distributions for international immigration were phased in over a ten year period from 2004 to 2014, after which the distributions remain constant to the end of the projection period. Only three of the regions were projected to depart significantly from the percent distribution in Table 5. They were Winnipeg, Southeast and South Central. Table 6 shows the estimated regional distribution for 2004 and the projected regional distributions for 2014.

TABLE 6: REGIONAL DISTRIBUTION OF INTERNATIONAL IMMIGRATION

REGION	PERCENT DIST'N (%) 2003-2004 (estimated)	2013-2014 (projected)
Southeast	11.49	6.60
South Central	9.42	6.83
Southwest	3.38	4.12
North Central	1.00	0.75
Winnipeg	70.32	78.63
Interlake	2.11	1.58
Parklands	0.91	0.94
North	1.36	0.53
Manitoba	100.0	100.0

On average, nearly 70.0% of international migrants to Manitoba in the last 5 years have moved to Winnipeg. However, over the last few years larger proportions of these immigrants have been choosing areas outside of Winnipeg as their destination. In particular, the Southeast and South Central regions have recorded significant increases in international immigrants over the last few years and are expected to maintain these increases over the medium term.

Although a small component of population growth for the remaining regions, it is projected that most regions will have positive international migration throughout the projection period although the North region will be between -10 and -20 for the majority of the period.

Detailed information on net international migration by region can be found in Table A4 Appendix A.

iv) INTERPROVINCIAL MIGRATION

Interprovincial migration along with international migration is a major component of migration growth and can have a significant impact on the year-to-year change in the populations of Manitoba's regions.

Table 7 shows the recent distribution of net interprovincial migration by region for the period 1998 to 2003. As can be seen, all regions lost population due to interprovincial migration during this time period.

TABLE 7: INTERPROVINCIAL MIGRATION BY REGION 1998 TO 2003

Region	IN		OUT	
	5 YEAR AVERAGE	PERCENT DIST'N (%)	5 YEAR AVERAGE	PERCENT DIST'N (%)
Southeast	774	5.4	857	4.9
South Central	486	3.4	501	2.9
Southwest	1,582	11.0	1,942	11.1
North Central	440	3.0	466	2.7
Winnipeg	8,630	59.8	10,765	61.5
Interlake	685	4.7	824	4.7
Parklands	700	4.8	714	4.1
North	1,134	7.9	1,446	8.3
Manitoba	14,431	100.0	17,516	100.0

This population loss due to interprovincial migration is projected to continue throughout the projection period. However, due to the aging of the population and a decreased propensity to migrate, the net interprovincial migration is projected to moderate from the levels of -4,300 in 2001, -2,880 in 2002 to -2,100 per year for most of the projection period.

Winnipeg, which had the largest interprovincial migration loss of -2,510 for 2001, will moderate to -1,580 by the year 2004. This is projected to remain at this level for the remainder of the projection period.

The outflow for the Southwest is projected to be the next highest at -250, for most of the projection period. The North, with a projected outflow of -240, follows the Southwest region.

The Interlake and Southeast regions are projected to have smaller outflows of -90 and -20 respectively, over the projection period.

Meanwhile South Central, North Central and Parklands are projected to have small inflows of 20, 10 and 40 respectively.

Detailed information on net interprovincial migration by region can be found in Table A5 Appendix A.

iv) INTRAPROVINCIAL MIGRATION

Table 8 illustrates the net intraprovincial migration (movements of Manitobans between regions of Manitoba) for the 5-year period 1998 to 2003.

During this period, Southeast, Southwest, Winnipeg and Interlake registered population gains from intraprovincial migration. The remaining regions registered losses for this type of migration, with the North having the largest loss at -785 persons annually.

TABLE 8: INTRAPROVINCIAL MIGRATION BY REGION 1998 TO 2003

Region	IN		OUT	
	5 YEAR AVERAGE	PERCENT DIST'N (%)	5 YEAR AVERAGE	PERCENT DIST'N (%)
Southeast	3,201	12.8	2,892	11.6
South Central	950	3.8	1,199	4.8
Southwest	2,147	8.6	2,071	8.3
North Central	1,566	6.3	1,636	6.5
Winnipeg	9,346	37.4	9,181	36.7
Interlake	3,988	15.9	3,259	13.0
Parklands	1,266	5.1	1,441	5.8
North	2,548	10.2	3,334	13.3
Manitoba	25,013	100.0	25,013	100.0

Intraprovincial flows between Manitoba regions are projected to be 24,000 for the last 22 years of the projection period. This will result in slightly smaller projected population flows than shown in Table 8 above.

The North is projected to have a significant net intraprovincial outflow for the entire projection period, with an annual rate of -750 for the final 20 years. The South Central, Parklands and North Central regions are projected to have more moderate net outflows of -240, -170, and -70 respectively for the same time period.

Meanwhile the Interlake is projected to have a net intraprovincial inflow of 700 persons per year from 2003 to 2025. The Southeast, Winnipeg and Southwest regions are projected to have net inflows of 300, 160 and 70 persons per year respectively, during the same period.

Detailed information on net intraprovincial migration by region can be found in Table A6 Appendix A.

iv) TOTAL MIGRATION

Total migration is the sum of the three migration components as described on the previous pages. For migration purposes, the regions can be arranged into three categories.

The first category is projected to have significant positive total migration and consists of the Winnipeg, Southeast, Interlake, and South Central regions.

- Net migration to Winnipeg is projected to increase from an annual rate of 3,600 in 2003 to 5,970 by 2009, after which it declines to 4,450 by 2013. It stays at this level for the remainder of the projection period. The total population gain from migration to Winnipeg in the next 22 years is projected to be 105,060. This is the largest gain of all eight regions.

- For the Southeast, a net value of 1,140 for 2003 is projected to decrease to 770 persons per year by 2013 and then remain at that level. This would result in the second largest total population gain, from migration, of 18,360 over the projection period.

- The Interlake region is projected to decrease from the 2003 level of 990 persons per year to 660 by 2013 and remain there for the next 12 years. The total population gain from migration is projected to be 14,660.

- For the South Central, an annual rate of 420 persons per year in 2003 is projected to increase to 600 persons by 2008, after 2008 it will decline to an annual rate of 350 by 2013 and it will remain constant until the end of the projection period. This results in a population gain from migration of 9,290 from 2004 to 2025.

The second category is projected to have relatively smaller migration flows for the projection period and consists of the Southwest, North Central and Parklands regions.

- The Southwest is projected to have a small annual inflow of 80 persons per year by 2013 and for the remainder of the projection period. However, for the first five years of the projection period, net migration is projected to range from 130 in 2003 to 150 in 2008, after which it declines to an annual rate of 80 by 2013. The total migration gain for the period is projected to be 2,090.

- For the North Central, a total projected outflow of -590 will be the result of a peak outflow of -100 in 2003 moderating to -30 by 2013.

- An outflow of -220 in 2003 dropping to -60 by 2007 and then increasing slightly to -70 by 2012 will lead to a projected total loss of -1,500 for the Parklands region.

The third category is projected to lose a significant portion of its population to migration. The North is the only region in this category.

- The North has a total projected migration loss of -22,330. This will be the result of projected annual losses starting with -940 in 2003, and increasing to -1,020 by 2012.

Detailed information on total net migration by region can be found in Table A7 Appendix A.
